EMWD Recycled Water Program

Valley-Wide Recreation and Park

District partners with Eastern Municipal Water District in the French Valley Recycled Water Retrofit Project, a multi-agency collaborative project that has significantly expanded recycled water use in French Valley.

As a leading proponent of recycled water use in the community, Valley-Wide has been both an early and aggressive adopter of recycled water use through its longstanding partnership with EMWD. In the past 11 years, Valley-Wide has more than tripled its parks on recycled water and more than doubled its streetscapes on recycled water. Much of that increase comes from the sites that Valley-Wide has retrofitted from potable (drinking) to recycled water as part of EMWD's nationally recognized Recycled Water Accelerated Retrofit Program. These commitments and efforts have also provided significant cost savings for Valley-Wide. It saved approximately \$1.2 million in the past year because the cost of recycled water is significantly lower than potable water.

"Parks are a community symbol of the importance of resource management, and there is no better commitment to our natural resources than using the right water for the right purpose," Valley-Wide General Manager Dean Wetter said. "By using recycled water, we are responsibly conserving our region's drinking water supplies while also providing significant cost-savings for the residents we serve."

Besides parks, Valley-Wide also is the responsible agency for a significant amount of streetscape landscaping throughout its service area. EMWD is California's sixth-largest retail water agency and one of the nation's leading recycled water organizations. Valley-Wide is one of EMWD's largest recycled water customers, currently using more than 1,000-acre feet of recycled water annually, enough water to meet the needs of 2,000 average households.
